CS290 (Winter 2018) - Project Proposal

Marc Tibbs (tibbsm@oregonstate.edu)

Due Date: February 18, 2018

I am planning to make a personal website for this project as a hub for showing my work. While my overall plan is to make a simple and minimalistic site, this project will allow me to tinker with the basics of website design and experiment with different designs for my personal website. I have listed the basic design concepts that I have so far for my website.

Structure:

The website will initially include total of four different pages.

- The **homepage** will have a picture carousel animation that will display some of the highlights of my work.

- The **about me** page will include a short bio on myself and have my resume on display and available for download.

- The **notes** page will contain a running journal of ideas that I have.

- The **sketches** page will act as a running catalog of the pictures and ideas that I sketch out.

Layout:

The layout of the pages will be simple and consistent with one another. In general each page will have:

- The **header** will contain a navigation bar with links to each page.

- The **body** of the page will include the main content of the page. For example, the resume page will display my resume.

- The **footer** of the page will include links to my various social media profiles, such as, linkedIn, Instagram, etc.

Theme:

In terms of theme, I would like my website to have a simple design. The majority of the site will be black and white and will use color sparingly to highlight key points.

Project Requirements:

- **The webpages should be presentable as a whole; the interface should be user friendly (text should be easy to read); the website should contain pictures or videos.**

  - The website will have a overall design to tie it all together. I plan to the same structure for each of the page so that the whole site has a cohesive design.
  - The website will focus on simple design which will lead to a user friendly design.
  - The website will include mostly pictures at this point. I have no desire to add videos at this time, but keep the option open for the future.

- **Website has 1 homepage and at least 3 subpages; the homepage and subpages have a horizontal menu that leads to the other pages.**

  - The website will initially be designed to have one homepade and 3 subpages.
  - All the pages will be reachable from the navigation bar in the header of each page.

- **The homepage has picture carousel animation (slideshow effect, for example, pictures in this page http://oregonstateparks.org.**

  - The homepage will have a picture carousel animation highlighting my most recent work.

- **Have a scroll box in one page. You can put anything inside the scroll box.**

  - I will have a scroll box on the "about" page to contain my resume.

- **One page has unordered HTML list with several entries.**

  - The "about" page will also contain an unordered list as part of my short bio.

- **There is a button to download files (map to the farm, menu in the restaurant, a personal CV, etc.) The downloaded file can either open in the browser or download to the local computer.**

  - There will be a button to download my resume on the "about" page.

- **There is a link that you can click and leads to outside webpages (linkedin, yelp, email, etc.)**

  - The footer of each page will contain links to my personal social media pages.
